

1 Appendix

1.1 Prompts for Input Parameter Annotation

You are a web data entry analyzer. You are provided with: an HTML element into which data has been entered, this is the input element. A corresponding HTML snippet that contains HTML elements near the input element. As well as one or more examples of the kind of data that was entered. Your task is to produce a label that describes the semantic role of the entered data in the context of the web application. Additionally produce one sentence describing what the entered data is used for, this will be the description. Your output should be of the form:

Label:

'<label output>'

Description:

'<description output>'

Input Element: <input class="ic-Input text" autofocus="autofocus" type="text" name="pseudonym_session[unique_id]" id="pseudonym_session_unique_id">

HTML Context: <form id="login_form" action="/login/canvas" accept-charset="UTF-8" method="post"><input name="utf8" type="hidden"><input type="hidden" name="authenticity_token" value="4TYK+JeUh18jzgP86dktLq6Neri3TjunoZPSEmhlQy6RTl2h8ceyFWGJbIaCgF9dhdxJ7oZ2DpLL/4h1IFQGWA==">

<h1 class="ui-helper-hidden-accessible">

Log In

</h1>

<input type="hidden" name="redirect_to_ssl" value="1">

<div class="ic-Form-control ic-Form-control--login">

<label class="ic-Label" for="pseudonym_session_unique_id">Email</label>

<input class="ic-Input text" autofocus="autofocus" type="text" name="pseudonym_session[unique_id]" id="pseudonym_session_unique_id">

</div>

<div class="ic-Form-control ic-Form-control--login">

```

18         <label class="ic-Label" for="pseudonym_session_password">Password</
label>
19         <input class="ic-Input text" role="textbox" type="password" name="
pseudonym_session[password]" id="pseudonym_session_password">
20     </div>
21     <div class="ic-Login__actions">
22         <div class="ic-Login__actions-timeout">
23             <input name="pseudonym_session[remember_me]" type="hidden"
value="0"><input type="checkbox" value="1" name="pseudonym_session[remember_me
]" id="pseudonym_session_remember_me">
24             <label for="pseudonym_session_remember_me">Stay signed in</
label>
25             <div class="ic-Login__forgot">
26 <a class="ic-Login__link forgot_password_link" id="login_forgot_password" href
="#">Forgot Password?</a>
27         </div>
28     </div>
29     <div class="ic-Form-control ic-Form-control--login">

31             Log In
32         </button>
33     </div>
34 </div> <!-- ic-Login__actions --></form>
35     Example Input Data: example@ualberta.ca, ianta@ualberta.ca

```

Listing 1: The prompt used to generate semantic labelings for input parameters using an LLM.

1.2 Prompts for Object Parameter Annotation

```

1     You are a semantic/domain object extractor. You are provided snippets of HTML
and generate XML output. The XML output should contain a representation of
the domain object present in the HTML input. To determine the correct domain
object pay careful attention to <a> tags and their 'href', 'title' and 'aria-
label' attributes these may contain information about the kind of operations
that can be done on the object, and may even refer to the kind of object that

```

it is. The root-level element of your output should be the semantically meaningful entity in the HTML snippet, and minimally include an id and a name.

Ignore UI related nesting in the HTML, the XML output should be as flat as possible. Optionally, you may receive examples of XML output for similar HTML snippets, the generated XML should conform to the structure and data types of the examples.

2

```
3 <div class="ic-DashboardCard" style="opacity: 1;" aria-label="test7" draggable="
  true" >
4 <div class="ic-DashboardCard__header" >
5   <span class="screenreader-only" >Course card color region for test7</span>
6   <div class="ic-DashboardCard__header_hero" style="background-color: rgb(98,
    110, 123);" aria-hidden="true" ></div><a href="/courses/108" class="ic-
    DashboardCard__link" >

30 </div>

```

Listing 2: The prompt used to generate labeled object parameters using an LLM.

1.3 Prompts for Object Parameter Resolution

```

1  You are given a query and a numbered list of XML Objects as options. Your job
is to return the number corresponding with the option which best matches or
relates to the query. Your output should be a number and nothing more.
2
3  Query: the psychology course
4
5  Options:
6  1. <Course id="108" name="Social Studies">
7  <Action href="/courses/108/discussion_topics" title="Discussions - Social

```

```

Studies" aria-label="Discussions - Social Studies"/>
8   <PublishButton>Publish Social Studies</PublishButton>
9   </Course>
10
11  2. <Course id="94" name="Psychology - S2 - 2017 - Kazmaier">
12    <Action href="/courses/94/discussion_topics" title="Discussions - Psychology
- S2 - 2017 - Kazmaier" aria-label="Discussions - Psychology - S2 - 2017 -
Kazmaier"/>
13    <PublishButton>Publish Psychology - S2 - 2017 - Kazmaier</PublishButton>
14    </Course>
15
16  3. <Course id="105" name="World History">
17    <Action href="/courses/105/discussion_topics" title="Discussions - World
History" aria-label="Discussions - World History"/>
18    <PublishButton>Publish World History</PublishButton>
19    </Course>

```
